CATCH Control

CATCH Control is an Australian made hardware and software solution designed to automate solar and loads to increase your savings.

Automated control

Automate your major household loads such as batteries, hot water, pool pumps, and EV chargers to maximise your solar savings.

Advanced Monitoring

User friendly app with remote load control, scheduling, live system monitoring, battery and savings calculator.

Flexible design

Compact, affordable and compatible with all major inverters, batteries, loads and ev chargers.

Tariff optimisation

Advanced Plan Optimizer calculates personalised savings from all available retail tariffs with new plans added all the time

Key benefits:

- Increased savings
- Automated control
- Easy operation
- Accurate and reliable

Multi-phase Model (6CH)

**Single-phase Model (2CH)**

AUSTRALIAN MADE

catch power™

Increase your energy savings

Automated solar self consumption

The key to solar savings is self-consuming the energy you produce, rather than exporting energy.

CATCH Control can automate your loads to optimise solar generation and battery storage.

We focus on the largest loads including hot water, pool pumps and electric vehicle chargers, and we are regularly adding new products to our compatibility list.

Access lower energy rates

Once you have your loads under control, the next step is to access better energy rates for buying and selling.
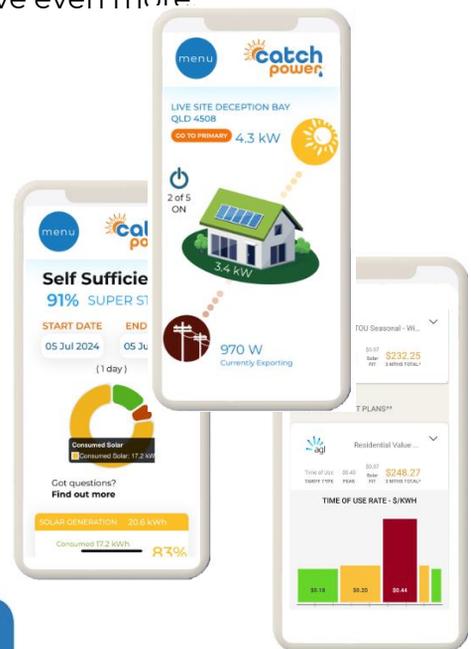

CATCH Control can show you how much you can save by switching and even ramp your solar, batteries and loads up or down to save even more.

Simple, intuitive app

An elegant and easy to use app is essential to seamlessly making clever solar simple.

CATCH Power has spent almost a decade developing our app's so everything you need is at your fingertips.

We are continuously updating our features and adding new algorithms to find new ways to make your solar life simpler and easier.
